PERMANON

PIONEERING SURFACE PROTECTION

PSI+14 GOLD LINE

- Excellent water-repellent
- Significant ease of cleaning
- High gloss effect
- Resistant, also against UV radiation
- Non-toxic, non-flammable
- Solvent-free
- Readily biodegradable according to OECD guidelines

PERM

PIONEERING SUR

ABOUT PSI+14 GOLD LINE

PERMANON® PSI+14 GOLD LINE with the highest concentration of 14Si-molecules and special polymer compounds is a newly developed sealant for all surfaces to ensure maximum protection for your high-quality surfaces. This solution can be used in your entire household, for vehicles on the road, as well as for water-borne vehicles.

The product is characterised by a heightened gloss level, high abrasion resistance against wind-borne particles and significant reduction from re-soiling. **The gloss enhancement compared to PERMANON® SILVER LINE represents an increase of 6%.**

The surface application with PERMANON® GOLD LINE achieves an instantaneous electrostatic binding of billions of tiny silicium molecules to the original material comparable to the impact of tiny magnets. As a result, microscopically small pores and capillaries are sealed and dirt particles and other impurities cannot settle anymore. Surfaces treated with PERMANON® GOLD LINE are considerably easier to clean and the well-maintained surfaces shine in maximum brilliance.

PERMANON® GOLD LINE is a water-based protective film, very simple in its application and, furthermore, much more stable than waxes or silicon-oil-based products.

PERMANON

PIONEERING SURFACE PROTECTION

PSI+14 GOLD LINE

- Excellent water-repellent
- Impurities produced by insects, bird droppings, sooting and other aggressive stains are considerably easier to clean and to remove
- High-gloss effect with a silky smooth surface touch
- Resistant to nearly all acids, bases, solvents, as well as UV-resistant
- Non-toxic, non-flammable, solvent-free and readily biodegradable (according to OECD criteria)

MORE GLOSS AND GREATER CARE

PERMANON® GOLD LINE is universally applicable and also safe for all waterproof materials: painted surfaces, GFK – rubber and plastic covers, plastics and hard synthetic fibers, metals and alloys etc. There is no danger associated with the usage of the product on the various surface textures listed above, since sealing takes place by means of electrostatic adhesion and through van der Waals interactions.

Impurities, such as fine dust, brake dust, insect and bird droppings, tar, resin and incineration residues, soot, oil and fat encrustations, fuel sediments and other harmful environmental influences on surfaces can easily be removed thanks to a previous sealing with PERMANON® GOLD LINE.

Take care for your surfaces in less time and let your high-value premium surfaces look like new!

PERMANON® GOLD LINE is not recommended for use on extensive transparent surfaces or glass due to its highly concentrated composition. Please use PERMANON® DIAMOND for these purposes.
